

PREGOVOR

Geographica Slovenica 19 prinaša drugi del referatov udeležencev blejskega posvetovanja: Pokrajinski učinki človekovih dejavnosti na življenjsko okolje. Pričujočih 17 prispevkov avtorjev iz SR Slovenije in tujine vsebinsko zaokroža tematiko tega odmevnega posvetovanja. Prevladujejo prispevki geografov. Konkretno ugotovitve avtorjev, ki temelje na rezultatih empiričnih raziskovanj in so obogatene z najnovejšimi teoretičnimi in metodološkimi pristopi bodo zagotovo pomemben mejnik pri bodočih prizadevanjih geografske stroke, v okviru vse intenzivnejšega raziskovanja tako kompleksne prostorske problematike kot je degradacija življenjskega okolja. Prispevki z omenjeno tematiko neposredno in posredno zadevajo odnos med naravo in človekom oziroma družbo. Spoznavanje zakonitosti tega odnosa naj bo vzpodbuda tudi raziskovalcem drugih strok, ki se ukvarjajo s posameznimi vidiki onesnaževanja okolja, prav tako pa tudi družbeni praksi ob reševanju teh problemov v okviru planiranja prostorskega oziroma družbenega razvoja.

FOREWORD

Geographica Slovenica No. 19 contains the second part of the reports from the Bled conference: landscape effects of human activities on living (human) environment. These 17 items contributed by the authors from the Socialist Republic of Slovenia and from abroad round off as to contents the subject of this resounded conference. Here prevail the reports of geographers. Concrete statements, based on the results of empiric studies, are enriched with the latest theoretical and methodological approaches which will mean an important turning-point at the future striving of geography in more intensive research of such a complex spatial question as degradation of the living environment. The items on the mentioned theme concerne directly and indirectly the relation among the nature, man and society. The rule recognition of this relation should encourage explorers from other sciences, who are engaged with particular views of environment pollution, as well as the social praxis at solving these problems in the frame of planning of spatial, namely social development.
