

VABILO NA PREDAVANJE

Society for conservation GIS Slovenia (SCGIS Slovenia)
vabi na

Using GIS to Determine Wildland Fire Hazard Areas

8. septembra 2015 ob 17.00

**v dvorani Zemljepisnega muzeja Geografskega inštituta Antona Melika
ZRC SAZU**

Gosposka ulica 16, Ljubljana

Predavanje bo v angleškem jeziku.

Predaval bo **John Schaeffer**, ki je kot inštruktor za GIS zaposlen v podjetju Juniper GIS in je član združenja SCGIS.

Povzetek predavanja:

Using GIS to Determine Wildland Fire Hazard Areas

The Oregon Department of Forestry created a set of rules for local agencies to use in designating Wildland Fire Hazard Areas in 1996, but with the rules written for analog methods. This project was the first attempt to use GIS to for this and was started in 1997, using ArcView 3.x and Spatial Analyst 2. In this presentation I will revisit the project, concentrating on concepts, problems, and issues and how to solve these problems, and hopefully showing a few tricks along the way.

Lepo vabljeni!
